

MICROLUX 2™

TRANSILLUMINATOR

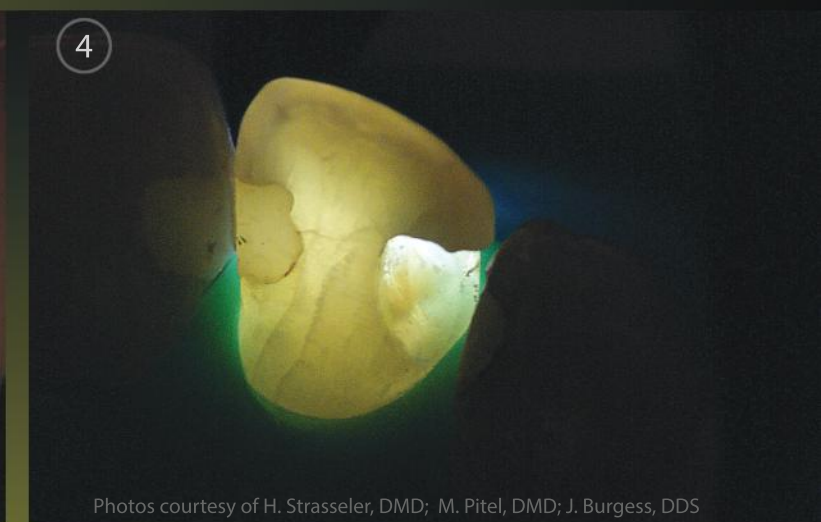

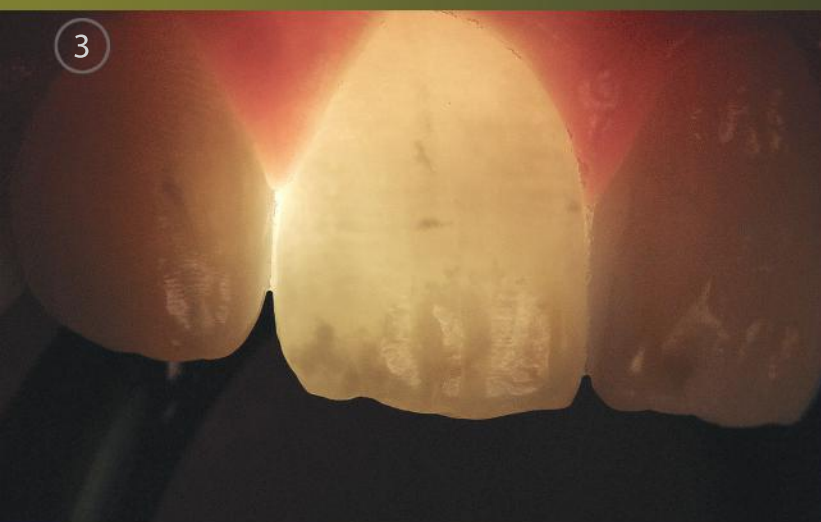

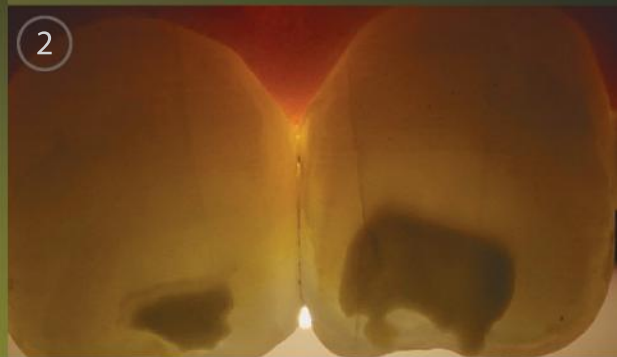

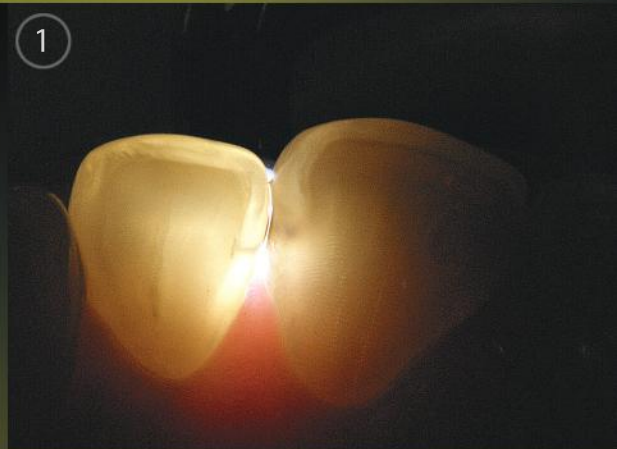

The Tool You'll Use With Every Patient!

The Microlux 2 is ergonomic, easy to use and has two intensities of light that enable accurate visualization of cracks, fractures and caries that don't appear on x-rays.

Use to evaluate:

1. Early stage caries
2. White spot lesions
3. Examine the severity of enamel discoloration
4. Analyze composite resins to determine a stained margin or caries penetrating deeper into the tooth

Microlux 2 is a valuable adjunctive diagnostic tool with a wide range of clinical applications.
