SIMPLY CLEVER TIP DESIGN

LM Dual Gracey™ combines the benefits of a universal curette and a Gracey curette in one: Each LM Dual Gracey™ tip has two elliptical cutting edges - a mesial and a distal edge. These instruments are designed for the removal of supra and subgingival calculus from all tooth surfaces. The LM Dual Gracey™ concept, combining Gracey curettes and universal curettes, enables fewer instruments to be used. The traditional set of four Graceys may be replaced with only two LM Dual Gracey™ instruments: Syntette™ and Syntette™ Anterior.

LM Dual Gracey™ concept, combining Gracey curettes and universal curettes, enables fewer instruments to be used. The traditional set of four Graceys may be replaced with only two LM Dual Gracey™ instruments: Syntette™ and Syntette™ Anterior.

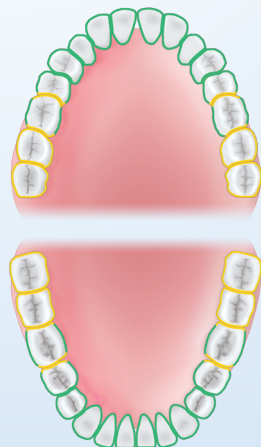

RECOMMENDATIONS FOR OPTIMAL TREATMENT

Check out the video about the clinical use of LM Dual Gracey™ presented by Minna Hyöttilä from Turku University of Applied Sciences.
